MASTER OF PUBLIC HEALTH
Program Director: Dr. Charlotte Guynes

The mission of the MPH program at Lynchburg College is to support and enhance public and community health through research, community service, and workforce development. The program provides students with mastery of theory, knowledge, and skills in areas of public and community health. The program prepares students with a broad foundation in all five core areas of public health: health behavior and education, health services administration, epidemiology, biostatistics, and environmental health sciences. The emphasis in Community Health Education also exposes students to specialized training in health promotion and education methods, health communication, program planning and evaluation, and program administration. All students have an opportunity to apply learned skills in practice during a culminating capstone course and supervised internship experience.

Students in the program will:

- Demonstrate practical knowledge and applicable skills in assessment of community health needs as well as the planning of community health programs.
- Identify and apply appropriate statistical methods to analyze and describe a public health program.
- Understand the relationship between environmental factors and community health.
- Address behavioral, social, and cultural factors that impact individual and population health and health disparities over the lifespan.
- Demonstrate practical knowledge and applicable skills in implementing and evaluating community health programs.
- Use epidemiologic methods to analyze patterns of disease and injury.
- Apply principles of leadership, policy development, budgeting, and program management in the planning, implementation, and evaluation of health programs for individuals and populations.
- Demonstrate knowledge and skills in ethical interactions associated with diverse populations and health issues.
- Demonstrate knowledge and skills in an internship experience designed to promote public health in cooperation with organizations, coalitions, and service providers.
- Demonstrate knowledge and skills in public health competencies related to program learning outcomes.

Total Hours Required: 30-36
Notes:
1. MPH 655 is the program capstone course. All students take this course during the final semester.
2. MPH 651 and/or MPH 652 are taken by a non-Health Promotion undergraduate student who has not had internship hours previously supervised by Lynchburg College.

MASTER OF SCIENCE IN ATHLETIC TRAINING PROGRAM
Program Director: Dr. Debbie Bradney

Athletic training is an allied healthcare profession focusing on the prevention, treatment, and rehabilitation of injuries and illnesses occurring to physically active individuals. Athletic trainers find employment in secondary schools, colleges and universities, sports medicine clinics, professional sports programs, industrial settings, and other healthcare environments.

The mission of the professional Master of Science in Athletic Training program is to educate students to become engaged and reflective health care providers through evidence-based medicine in a variety of clinical settings, active involvement in distinctive research, and the cultivation of professional behaviors. This will be achieved using multiple modes of instruction, close working relationships with committed faculty, staff, and peers, as well as a state of the art cadaver lab and established research laboratories.

The Master of Science in athletic training is designed for students who have graduated from baccalaureate programs (not including CAATE accredited undergraduate athletic training programs) and who aspire to be athletic trainers. This degree combines didactic and clinical education to allow students to apply theoretical and practical athletic training knowledge in professional work settings. Students will engage in clinical educational experiences that will prepare them to pass the Board of Certification (BOC) Examination, which, in turn, will allow them to serve as entry-level certified athletic trainers. In addition, the program is designed to give students a foundation in evidenced based medicine through exposure to research design and while studying research methods. The program requires sixty-six credit hours for completion.

Entry into the athletic training major is competitive, and all students who apply may not be accepted into the program. In order to be considered for admission, students must have a:

1. QPA of 2.75 or higher
2. A minimum of a C or higher in the following courses:
   a. 8 credits of anatomy and physiology
   b. 3 credits of kinesiology
   c. 3 credits of exercise physiology
   d. 3 credits of statistics
3. Current CPR and AED training at the healthcare professional rescuer level. Applications, which are obtained from the Athletic Training Department Chair, must be completed before students will be considered for admission to the major. To maintain status as an athletic training major, students must maintain 3.0 QPA or higher, pass semester-end competency examinations associated with each clinical course, receive a grade of B- or higher in all required athletic training major courses, and satisfactorily complete all clinical education course requirements. Specific policies and regulations for athletic training majors are published in the course syllabi and/or the athletic training student handbook.

Lynchburg College is currently seeking accreditation for the Master of Science in Athletic Training graduate program from the Commission on Accreditation of Athletic Training Education (CAATE). The College anticipates matriculating its first graduate class in 2016. Upon accreditation by CAATE (anticipated summer 2017 as accreditation cannot occur before the first class matriculates) and completion of this program, students will be eligible to sit for the Board of Certification (BOC) examination and pursue a
